SUMMARY

Frontend-focused full-stack developer with 4+ shipped projects in React, TypeScript, and Python (Flask). Built production-grade UIs handling real-time multi-user flows, ML-backed analytics dashboards, and NGO-facing donation platforms. 3× national hackathon competitor; active open-source contributor (GSSoC 2026). Seeking frontend, full-stack, or product engineering roles.

EDUCATION

A.P. Shah Institute of Technology

B.E. in Information Technology — CGPA: 8.9 / 10

Sheth K.V. Parekh Anand Junior College

HSC (State Board) — 68.67%

Thane, Maharashtra

Aug 2023 – Jun 2027

Mumbai

2022 – 2023

PROJECTS

Saamvara | React, TypeScript, Vite, Tailwind CSS v4, FastAPI, Firebase, Scikit-learn, Web Speech API

- Engineered an AI-governed chit fund platform with a trained Random Forest classifier (**89% accuracy**) delivering real-time member risk scores across **10+ interactive screens** using React + TypeScript and Redux Toolkit.
- Built a Hindi Voice AI Foreman via Web Speech API and a portable **ChitScore** credit system (0–1000) with self-healing default protocols, reducing manual foreman intervention to **zero**.

SafeCity — Public Safety Platform | React.js, Flask REST API, PostgreSQL, Scikit-learn, Pandas

- Architected a full-stack incident-reporting system processing **500+ geotagged records**; Flask REST API served **10+ dashboard endpoints** with sub-200ms response times.
- Trained a Random Forest classifier on **120+ labeled incidents** for severity prioritization, achieving **83% validation accuracy** and reducing manual triage effort by ~60%.
- Built 5 interactive React visualizations (heatmaps, trend charts) enabling analysts to surface hotspots **3× faster** vs. spreadsheet-based workflows.

BloomPath | Python, React, Scikit-learn, AWS Bedrock, DynamoDB, AWS S3

- Developed an ML-based job recommendation platform exclusively for women, classifying users by education level and analyzing skills, availability, and location to surface flexible work-from-home opportunities via a Random Forest model.
- Personalized job suggestions and predicted suitability scores using AWS Bedrock; persisted user profiles and job metadata in **DynamoDB**, with the platform deployed end-to-end on **AWS S3**.

ImpactSphere — NGO Donation Platform | Python (Flask), MySQL, Bootstrap, HTML/CSS

- Shipped a dual-dashboard platform (donor + NGO admin) tracking **200+ donations** across **3 partner NGOs**; implemented session-based auth and role-gated views for **2 user types**.
- Designed a MySQL schema with **6 normalized tables**; added real-time reporting queries that reduced NGO reconciliation time from hours to **under 5 minutes**.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), TypeScript, Java, C

Frontend: React.js, Vite, Tailwind CSS, Framer Motion, Redux Toolkit, React Hook Form, React Router DOM, HTML5, CSS3, Bootstrap

Backend & APIs: Flask, Django, Django REST Framework, REST APIs

Databases: MySQL, PostgreSQL, Firebase Firestore

ML / Data: Scikit-learn, Pandas, NumPy, supervised classification, data visualization

Tools: Git, GitHub, Postman, VS Code, MySQL Workbench

HACKATHONS & OPEN SOURCE

Smart India Hackathon 2025 | National level, 1000s of competing teams

- Delivered a full-stack government-problem solution end-to-end (ideation → working prototype) within **36 hours**, covering system design, backend APIs, and frontend UI.

AI Bharat Hackathon 2025 | GDG On Campus Hackathon 2024 | AI/ML & product build events

- Prototyped ML-driven solutions under 24-hour constraints; presented live product demos to industry judges at GDG, earning positive evaluator feedback on UX quality.

GirlScript Summer of Code (GSSoC) 2026 | Open Source Contributor

- Merged **3+ PRs** across open-source repositories – feature additions, bug fixes, and documentation – via async Git workflows and maintainer code reviews.

CERTIFICATIONS

Google Cloud Cybersecurity | AWS Generative AI Foundations | AWS ML for NLP | Oracle Database Foundations | Cisco Junior Cybersecurity Analyst
